

## Press release

### RWE announces further milestone for Triton Knoll Offshore Wind Farm

- **Major milestone in one of the world's largest offshore wind farms which will contribute towards the delivery of clean energy from offshore wind in the UK**
- **Triton Knoll turbines commissioned on time, with full operations expected Q1 2022**

Swindon, 13 January 2021

**Sven Utermöhlen, CEO Offshore Wind, RWE Renewables:** “Commissioning the final turbine at Triton Knoll is a huge achievement, especially during a global pandemic. It’s a great credit to the project team and to our supply chain partners that we have reached this milestone on time. The UK plays a key role in the delivery of RWE’s Growing Green strategy and Triton Knoll is currently one of the largest offshore wind project realized by RWE. We are driving forward up to 2.6 GW of new projects off the coast of the UK, in addition to the 1.4 GW Sofia Offshore Wind Farm: As RWE we are committed to supporting the UK government’s ambitious offshore wind targets.”

Turbine commissioning at Triton Knoll Offshore Wind Farm has been successfully completed. The wind farm, constructed by RWE on behalf the project partners, has reached this milestone on time, overcoming the challenges posed by the global pandemic.

Once fully operational, the power output of Triton Knoll will be 857 megawatts (MW), making it one of the world’s largest offshore wind farms. Standing at 164 meters tall, full operations of the 90 turbines are expected in the first quarter of 2022. Triton Knoll will make an important contribution to the UK’s energy system, generating sufficient electricity to meet the needs of around 800,000 homes each year.

RWE is #2 in the world for offshore wind and is driving the development of the largest offshore wind pipeline in the UK. It has committed to investing €50 billion gross through to 2030 to expand its powerful and green generation capacity to 50 gigawatts, with around £15 billion earmarked for the UK.

# RWE

Julian Garnsey, Project Director for RWE and Triton Knoll added, “I am very proud of the Triton Knoll team’s achievement in completing the commissioning of the turbines on this nationally significant infrastructure project. The construction team has shown a huge amount of resilience in reaching this milestone. I want to thank our supply chain partners and all those that have worked so hard on our sites to keep the project on track, despite the many challenges posed by the coronavirus pandemic.”

The project represents an investment of around £2 billion that includes construction of the wind farm and the grid connection. Triton Knoll is jointly owned by RWE (59%), J-Power (25%) and Kansai Electric Power (16%). RWE led the wind farm’s development as well as construction and will also operate and maintain it on behalf of the project partners.

Triton Knoll leaves a strong legacy for the future of wind energy in the region, with the specially constructed Triton Knoll Operations & Maintenance base being expanded to become the new ‘Grimsby Hub’ facility, supporting both existing and future RWE operated projects. This new facility has the potential to create around 60 new, local jobs plus indirect jobs required in support of the facilities. The Hub will enable RWE to strengthen its relationship with the region’s businesses and local communities, by committing to a longer-term presence in the area.

**RWE**

*RWE is leading the way to a green energy world. With an extensive investment and growth strategy, the company will expand its powerful, green generation capacity to 50 gigawatts internationally by 2030. RWE is investing €50 billion gross for this purpose in this decade. The portfolio is based on offshore and onshore wind, solar, hydrogen, batteries, biomass and gas. RWE Supply & Trading provides tailored energy solutions for large customers. RWE has locations in the attractive markets of Europe, North America and the Asia-Pacific region. The company is responsibly phasing out nuclear energy and coal. Government-mandated phaseout roadmaps have been defined for both of these energy sources. RWE employs around 19,000 people worldwide and has a clear target: to get to net zero by 2040. On its way there, the company has set itself ambitious targets for all activities that cause greenhouse gas emissions. The Science Based Targets initiative has confirmed that these emission reduction targets are in line with the Paris Agreement. Very much in the spirit of the company’s purpose: Our energy for a sustainable life.*
